Toyota Recalls Certain 2024 Toyota Tundra Vehicles

May 20, 2026

PLANO, Texas (May 20, 2026) — Toyota is conducting a safety recall involving certain model year 2024 Toyota Tundra non-hybrid vehicles in North America and Latin America countries. Approximately 44,000 vehicles are involved in this recall in the U.S.

There is a possibility that certain machining debris may not have been cleared from the engine when it was produced. In the involved vehicles, this can lead to potential engine knocking, engine rough running, engine no start and/or a loss of motive power. A loss of motive power while driving at higher speeds can increase the risk of a crash.

Toyota conducted two prior similar recalls. The first was in May 2024, and the second was in November 2025. The engines involved in this new recall were produced using additional controls for removing manufacturing debris. We have found that, even after these additional controls, the remaining debris could be sufficient to cause damage to the #1 main bearing and lead to this issue. Engines produced after those included in this recall were manufactured with an improved #1 main bearing to help resist certain debris that might remain.

Toyota is completing the remedy preparations for this safety recall and the one announced in November 2025. We aim to finalize these details within the next couple of months. When finalized, Toyota plans to contact customers in phases as the remedy becomes available for their vehicle. Remedy phases will generally be released based on vehicle time in service. In the meantime, owners with vehicles experiencing any symptoms should contact their Toyota dealer.

For the recall announced in May 2024, Toyota has already notified all customers directly about that remedy. Of the approximately 102,000 covered by that recall in the U.S., our dealers have already repaired more than 77,000 vehicles using engines produced with the improved #1 main bearing.

Toyota urges owners to take their vehicle to their Toyota dealer for the free repair when they are notified that the remedy is available.

Information about automotive recalls, including but not limited to the list of involved vehicles, is current as of today’s filing date and is subject to change thereafter. To see if your vehicle is involved in a safety recall visit Toyota.com/recall or nhtsa.gov/recalls and enter your Vehicle Identification Number (VIN) or license plate information.

For any additional questions, Toyota customer support is also available by calling the Toyota Brand Engagement Center (1-800-331-4331).
