

# Cincinnati Children's Hospital Medical Center and Toyota Kick-Off Nationwide Pledge to Encourage Americans to Buckle Up For Life

September 17, 2013

NEW YORK, NY– September 17, 2013 – Cincinnati Children’s Hospital Medical Center, a national leader in pediatric medicine, and Toyota announced today the first annual National *Buckle Up for Life* Day – a nationwide movement dedicated to improving child passenger safety. In recognition of Child Passenger Safety Week (September 15-21, 2013), the partnership will launch “National *Buckle Up for Life* Day” revealing new research findings on child car seat safety, increased funding from Toyota for three new *Buckle Up for Life* partner cities, and a nationwide pledge encouraging the nation to *Buckle Up for Life*.

Building on a partnership that began in 2004 between one of the world’s leading children’s hospitals – Cincinnati Children’s and the global automotive manufacturer – Toyota, the *Buckle Up for Life* program is designed to help save lives by educating communities about the number one cause of death of children under the age of 12 in the United States—motor vehicle crashes.

***Car crashes are the number one killer of children in the United States between the ages 1 and 12.<sup>[i]</sup> Only 1 out of every 4 child car seats are properly installed.<sup>[ii]</sup>*** Furthermore, due to multiple factors, Hispanic and African American children are 10 times less likely to be properly restrained in a vehicle<sup>[iii]</sup>.

*Buckle Up for Life* has recently conducted a survey which reveals parental overconfidence in their knowledge about child car seats may be a contributing factor to some deaths of children who are involved in fatal car crashes.

## Key Survey Findings and Tips

- **Confidence levels are high:** When selecting the appropriate car seats, 96 percent of parents are “very/somewhat confident.” However, 41 percent of parents are unaware that car seats have an expiration date.
  - **Tip:** Always remember to read the user’s guide to find out the seat’s expiration date and other important information. Every car seat is different.
- **Car seat inspection station usage is low:** Nearly half of parents (42 percent) have had their child car seat installation checked by an expert. Yet many also mentioned practicing unsafe behaviors, such as dressing their child in bulky outerwear or not removing their child’s jacket before buckling him/her into the child car seat (41 percent); and more than a quarter of parents surveyed (26 percent) have allowed their child to ride in the front seat of the vehicle before the age of 12.
  - **Tip:** Always buckle your child in the car seat first before placing coats or blankets over the harness. Keep in mind that bulky clothing can alter a snug fit.
  - **Tip:** Look for a local child car seat inspection station via the [National Highway Traffic Safety Administration](#).

- **African Americans are less informed about some critical child passenger safety issues:** African American parents surveyed are more likely than average to acquire a second-hand car seat (22 percent) without knowledge of the car seat's history. Among those who say they have acquired a second-hand car seat, 61 percent are unaware whether or not there was a product recall and 27 percent did not know the age of the car seat.
  - **Tip:** Always remember to get as much information as possible about a second-hand car seat, including the user's guide. Be aware of technology and standard improvements as well as car seat recalls.
  
- **Hispanics feel overwhelmed by the choices:** Only one-third of Hispanic parents are confident when researching, choosing, acquiring and installing a child car seat. However, for some Hispanic parents the research phase can leave them feeling overwhelmed (18 percent) while the installation phase can leave them feeling frustrated (8 percent).
  - **Tip:** Always remember that there is information available for every stage of the child car seat journey. Visit [BuckleUpforLife.org](http://BuckleUpforLife.org) for more details about child car seat safety.

“The research findings are particularly alarming because even though parents indicate they are completely confident throughout the child car seat journey, the number of children dying unnecessarily in motor vehicle-related crashes is still high,” said Dr. Victor Garcia, founding director of Trauma Services at Cincinnati Children's, professor of pediatric surgery and visionary of *Buckle Up for Life*. “This is a public health emergency of epic proportions. The seat belt, or car seat should be held in the same health category as a vaccine as it has the power to save lives,” said Garcia.

### **Multi-year, Multi-million Dollars Funds *Buckle Up for Life* Expansion**

As part of Toyota's ongoing commitment to provide safety programs to passengers and drivers of all ages, the company has increased its funding of *Buckle Up for Life* by six million dollars over the next three years, allowing the program to expand from the current eight cities to a total of 17 cities by 2016. This investment is added to the more than two and a half million dollars of support Toyota has provided over the past nine years. To-date *Buckle Up for Life* has had tremendous results, including providing more than 40,000 child car seats to families in need. In one city alone, the use of proper child car seats by program participants nearly tripled.

The three new *Buckle Up for Life* partner hospitals for 2013 are Cohen Children's Medical Center (Long Island, NY), Le Bonheur Children's Hospital (Memphis, TN) and Phoenix Children's Hospital (Phoenix, AZ). They join successful programs already in place with local hospital partners in Chicago, Cincinnati, Houston, Las Vegas, Los Angeles, Philadelphia, Orange Country, CA, and San Antonio.

“At Toyota, we are strongly committed to the belief that driver and passenger safety is a universal need and something everyone should have access to,” said Latondra Newton, group vice president of Toyota Motor North America Inc. “That is why we partnered with Cincinnati Children's to create *Buckle Up for Life*. We consider today to be both a celebration of all we have achieved and a call to action for the tremendous amount of work still to be done.”

### ***Buckle Up for Life* Pledge**

The *Buckle Up for Life* pledge is a national call to action inviting the public to take a pledge to *Buckle Up for Life* and share the safety with loved ones. Visit the *Buckle Up for Life* website, [www.BuckleUpforLife.org](http://www.BuckleUpforLife.org) or join the more than 170 million members of the Causes community at [www.causes.com/Toyota](http://www.causes.com/Toyota) to take the

pledge.
