

# Five Winners Selected in Toyota 'Ideas for Good' Challenge

May 11, 2011

TORRANCE, Calif. (May 11, 2011) – Toyota Motor Sales (TMS), U.S.A., Inc. has announced the five winners in its Ideas for Good initiative, a unique program which invited consumers to share their ideas on how to repurpose Toyota technologies beyond their automotive applications. The winning ideas, as determined by popular vote, will be brought to life with the help of Toyota, Carnegie Mellon University (CMU) and Deeplocal experts during a rapid prototyping session in June.

An extension of Toyota's enduring commitment toward continuous improvement, the Ideas for Good initiative inspired people to imagine new possibilities for five distinct Toyota technologies: Total HUMAN Model for Safety (T.H.U.M.S.), Solar Powered Ventilation System, Hybrid Synergy Drive (HSD), Advanced Parking Guidance System and Touch Tracer Display. The submission period ran from November 8, 2010 through February 28, 2011. More than 4,000 submissions were evaluated by a panel of independent judges, including Keith Grossman of *WIRED* magazine; Grace Hawthorne of Stanford University; Josh Morenstein of fuseproject; Joel Stitzel, Ph.D. of Wake Forest University Baptist Medical Center and Jake Ward of *Popular Science* magazine. From there, the public voted for its favorite idea from among five finalists in each category at [www.toyota.com/ideasforgood](http://www.toyota.com/ideasforgood). The top five ideas receiving the most votes and highest judges' scores include:

- **Building a Better Bike Helmet submitted by Stu S.:** Inspired by **T.H.U.M.S.**, this idea uses Toyota's technology to assess the strengths and weaknesses of current bicycle helmets and improves upon these designs to protect riders from traumatic brain injuries.
- **Pure Air submitted by Tim W.:** Using the **Solar Powered Ventilation System**, this idea proposes a way to draw smoke from huts in developing nations, ultimately providing improved health conditions in an environmentally-friendly way.
- **Power Plant Gym submitted by Birken S.:** This idea was inspired by Toyota **HSD** technology to convert the energy exerted at a gym into electricity. Connecting exercise equipment to a system of resistance cords and turbines, users would put electricity back into their local power grid simply by working out.
- **Automated Firefighting Extension Ladder Guidance System submitted by Fran O.:** This idea uses the **Advanced Parking Guidance System** to increase efficiency and precision in emergency situations, reduce risk and decrease the amount of time it takes to accurately position a firefighting ladder.
- **Touch Tracer Mouse, Keyboard & Monitor submitted by David C.:** By integrating Toyota's **Touch Tracer Display** into a computer mouse, keyboard and monitor all in one place, this idea allows users to easily toggle between the mouse, keyboard and numerical pad while the heads-up display shows them exactly where their fingers are in relation to the keys.

"The caliber of submissions was impressive," said Bill Fay, group vice president of marketing for TMS. "The winning ideas truly re-imagine existing Toyota technologies in ways that continue to improve quality of life and positively impact the communities in which they might be used. We look forward to bringing these ideas to fruition alongside the winners and our partner organizations next month."

In addition to receiving a choice of three Toyota vehicles—Highlander Hybrid, Prius or Venza—winners are invited to participate in a rapid prototyping session June 3-5, 2011 at CMU's campus in Pittsburgh, PA. Each will be paired with a team of engineers and experts from Toyota, CMU and "post-digital" shop Deeplocal to concept and build their idea over the course of the three-day workshop. In partnering with CMU faculty and

students and Deeplocal staff, Toyota will leverage the two organizations' highly-skilled engineers and designers to bring the winning ideas to life.
