

Statement from Toyota on Supplier CTS

January 28, 2010

Toyota Motor Engineering & Manufacturing North America (TEMA) has been working closely with supplier CTS on a revised design that effectively remedies the problem associated with accelerator pedals. Pedals featuring the revised design are now in full production at CTS to support Toyota's needs. Meanwhile, we are also working with them to test effective modifications to existing pedals in the field that will be rolled out as quickly as possible.

"We commend CTS for working diligently and collaboratively to find a solution to the potential problem and in developing a new design," said Chris Nielsen, TEMA's Vice President of Purchasing. "CTS is a long-term and valued supplier to us."
