

2019 Toyota Prius

September 26, 2019

Hybridization is now considered commonplace, but it all started two decades ago with the introduction of the first Toyota Prius in the U.S. Today, the Prius remains one of the world's most fuel-efficient vehicles without a plug, with EPA-estimated 58 city / 53 highway / 56 combined MPG fuel economy ratings (Prius Two Eco). The addition of an AWD-e system for 2019 adds even more options for the iconic Prius model, which offers newly refined front and rear exterior styling including an all-new front bumper, headlamp design and taillamp design. The 2020 Toyota Prius Prime offers a new 5th seat for even more room, Standard Apple CarPlay®, SiriusXM® and Amazon Alexa compatibility, two additional 2.1A USB ports for the rear passengers and so much more.
