

Toyota Develops Packaged Fuel Cell System Module to Promote the Hydrogen Utilization toward the Achievement of Carbon Neutrality

February 26, 2021

Toyota City, Japan (February 26, 2021) ?Toyota Motor Corporation (Toyota) has developed a product that packages a fuel cell (FC) system into a compact module and plans to begin selling it in the spring of 2021 or later. The new module will be easily utilized by companies that are developing and manufacturing FC products for wide variety of applications, including mobility such as trucks, buses, trains and ships, as well as stationary generators (referred to hereafter as “FC product companies”).
