

Sales, Production, and Export Results for February 2022

March 30, 2022

TOYOTA CITY, Japan (March 30, 2022) ? Global sales in February 2022 were generally flat from the previous year. Global production was partially affected by the parts supply shortage caused by the spread of COVID-19, but as a result of the cooperation of our suppliers, overseas production reached a record high for February.

In addition, thanks to the support of many customers, cumulative global sales of electrified vehicles (HEV, PHEV, FCEV, BEV) reached 20 million units as of the end of February 2022. Toyota estimates that the use of Toyota's electrified vehicles has resulted in approximately 160 million fewer tons of CO2 emissions and has saved approximately 65 million kiloliters of gasoline as of the end of February 2022. Going forward, Toyota will continue to create ever-better cars with a full lineup of electrified vehicles for the realization of a carbon-neutral society.
