Toyota's Production Engineering and Manufacturing Center (PEMC), located in Georgetown, Kentucky, is the headquarters for Production Engineering (PE) and is home to nearly 1,100 employees. Toyota's production engineers spearhead manufacturing transformation, develop advanced manufacturing processes and technologies and drive facility and environmental initiatives for the company's 14 North American manufacturing facilities. The company's PE division employs more than 1,800 across its North American facilities, all dedicated to working toward a future of mobility for all while maintaining Toyota's position as a leader in safety, quality, productivity, efficiency and environmental sustainability.
