Engineered to stand out, the Toyota Crown breaks the traditional sedan mold and gives drivers a car that excites the senses. Available in three grades: XLE, Limited and Platinum, Toyota Crown offers a choice of two different hybrid powertrains and standard All Wheel Drive. The HYBRID MAX powertrain, exclusive to the Platinum

grade, is Toyota's all-new performance hybrid that puts out 340 net horsepower and is paired with a 2.4-liter turbocharged engine and a direct shift 6-speed automatic transmission. The XLE and Limited grades come equipped with THS IV, a highly efficient hybrid system that can achieve up to a manufacturer-estimated 41 MPG City/Highway combined fuel economy rating. The Toyota Crown's "lift-up" design features large wheels for striking style and easy ingress and egress, and an associated ride height gives drivers great road visibility. Its flowing silhouette and sculpted body lines create a fresh look that's entirely unique for its class.
