

Toyota is conducting a safety recall involving certain 2022 model year Tundra vehicles

July 13, 2022

PLANO, Texas (July 13, 2022) – Toyota is conducting a safety recall involving certain 2022 model year Tundra (including HEV) vehicles in the U. S. Approximately 31,400 vehicles are involved in this recall.

In the affected vehicles, a software programming issue can cause the front camera image of the Panoramic View Monitoring (PVM) system to display instead of the rear camera image when the vehicle is placed into reverse position. If the rear camera image does not display after the vehicle is placed into reverse position, the vehicle will not comply with certain U.S. safety requirements and may increase the risk of a crash during a backing event.

For all involved vehicles, Toyota dealers will reprogram the Parking Assist ECU (Electronic Control Unit) at no cost to customers.

Owners of involved vehicles will be notified by mid-August 2022.

Information about automotive recalls, including but not limited to the list of involved vehicles, is current as of today's filing date and is subject to change thereafter. To see if your vehicle is involved in a safety recall visit Toyota.com/recall or nhtsa.gov/recalls and enter your Vehicle Identification Number (VIN) or license plate information.

For any additional questions, customer support is also available by calling the Toyota Brand Engagement Center (1-800-331-4331) for Toyota vehicles.
